## **LISTING OF CLAIMS:**

- 1. (Previously Presented) A process for evaluating the strength of a specific intellectual property for purposes of commercializing it comprising the steps of:
  - a) interacting with a computer;
  - b) entering data from one or more sources including from a complete set of preselected tasks and from a questionnaire completed by the owner of the intellectual property, into said computer, said computer having been pre-programmed such that said data is organized by one or more predetermined risk factors grouped into categories;
  - c) evaluating the data by comparing each risk factor and each category to a preset standard;
  - d) computing a score by transforming said data into a composite score which represents a relative degree of strength associated with any undertaking to commercialize said intellectual property;
- 2. (Original) The process of Claim 1 wherein entering of the data into the computer is done via telephone from a location other than the location having the computer.
- 3. (Previously Presented) The process of Claim 1 wherein the predetermined risk factors are grouped into categories selected from the categories of subjects comprising: Technical Orientation, Technical Review, Preliminary Assessment, Patent Study, Market Identification and Analysis, Industry Intelligence, Cost/ Benefit Analysis, Marketing/Licensing Assessment and Licensing/Enforcement.
- 4. (Previously Presented) The process of Claim 3 wherein transforming said data is achieved by calculating a category score for each category.
- 5. (Previously Presented) The process of Claim 4 wherein each category score is weighted and combined with other category scores and used to modify a primary risk indicia to calculate said composite score.
- 6. (Original) The process of Claim 5 wherein the composite score is modified by a moral hazard factor to calculate a probable success factor.
- 7. (Previously Presented) The process of Claim 6 wherein the probable success factor is multiplied in a post-computer step by projected recoveries to determine the net recovery from commercializing the intellectual property.
- 8. (Original) The process of Claim 7 wherein the intellectual property to be commercialized is a patent.
- 9. (Original) The process of Claim 7 wherein the intellectual property to be commercialized is a trademark.
- 10. (Original) The process of Claim 7 wherein the intellectual property to be commercialized is a copyright.

- 11. (Previously Presented) A process for determining the probable success of a lawsuit comprising the steps of:
  - a) interacting with a pre-programmed computer;
  - b) entering data from one or more sources including from a completed set of preselected tasks and from a questionnaire completed by the owner of the intellectual property into said computer, said computer having been preprogrammed such that said data is organized by pre-determined categories;
  - c) evaluating the data by comparing each category to a preset standard;
  - d) transforming said data into a composite score which represents a relative degree of strength associated with the lawsuit;
  - e) using the composite score to determine a probable success factor for undertaking the lawsuit.
- 12. (Original) The process of Claim 11 wherein the lawsuit is one involving intellectual property.
- 13. (Previously Presented) The process of Claim 12 wherein the composite score is based upon an evaluation of one or more risk factors specific to the intellectual property upon which a suit is being brought.
- 14. (Previously Presented) The process of Claim 12 wherein the composite score is a category score resulting from categorizing various risk factors into categories and determining a category score.
- 15. (Original) The process of Claim 14 wherein the category score is used to modify a primary risk indicia in determining a composite score.
- 16. (Original) The process of Claim 15 wherein an adjustment for moral hazard is made to the composite score resulting in a probable success factor.
- 17. (Previously Presented) The process of Claim 16 wherein the probable success factor is applied in a post-computer step to a projected recovery to determine the net recovery.
- 18. (Original) The process of Claim 14 wherein the determination of the category score is accomplished using at least one relative risk factor.
- 19. (Cancelled)
